

# NC MEDICAL DEVICE DIRECTORY 2008

[NCMedicalDevice.org](http://NCMedicalDevice.org)

**W**elcome to the 2008 edition of the North Carolina Medical Device Directory. This directory was assembled by the North Carolina Medical Device Organization (NCMD), a membership forum of the North Carolina Biosciences Organization (NCBIO). The Directory is organized into three sections:

NC Medical Device Organization Members - A listing of medical device and service companies that are members of NCMD and NCBIO.

Organization Information - An alphabetical listing of all entities identified by NCMD in its directory development process. The listing contains detailed information about each listed entity.

Listing by Organizational Type - An index of entities in the Directory according to the nature of their activity; entities may be listed under more than one activity heading.

Information in this Directory was derived from multiple sources, including an online survey of North Carolina medical device companies and medical device registration listings from the United States Food and Drug Administration. While NCMD and NCBIO have worked to optimize the accuracy of the information provided herein, users of the directory should understand that neither the forum nor NCBIO makes any representation regarding accuracy or reliability of the information.

NCMD and NCBIO are very grateful for the support of Forma in formatting and publishing the Directory. The Organizations also wish to express their appreciation to the many entities that contributed information for this project, especially those who responded to NCMD's online survey.

Additions and corrections to the information provided in this directory are welcome. Please send any such information to NCMD at P.O. Box 14354, Research Triangle Park, North Carolina, 27709; or by e-mail to [info@ncmedicaldevice.org](mailto:info@ncmedicaldevice.org).

Sam Taylor  
President, North Carolina Biosciences Organization

Affinergy develops site-specific biological & drug delivery systems using biofriendly binders that selectively adhere to proteins, drugs, cells, and other biomaterial surfaces in order to kickstart biology toward an intended outcome. Affinergy is focused in the orthopedic and biologic drug delivery markets with a growing interest in cardiovascular applications. Affinergy's technology was patented at Duke University and has been incubated at Becton Dickinson's research center in Research Triangle Park. Affinergy was awarded 2005 Innovation of the Year by Frost & Sullivan in the category of Medical Device Coatings.
